

CONTROL SOFTWARE

REMOTE CONTROL

Irrigation system management and control software, even remotely, which allows the programming of irrigation cycles, the control of the filtering system, the correct working of the pumping station and the interaction with the weather data collected by sensor in the field.

BASIC VERSION

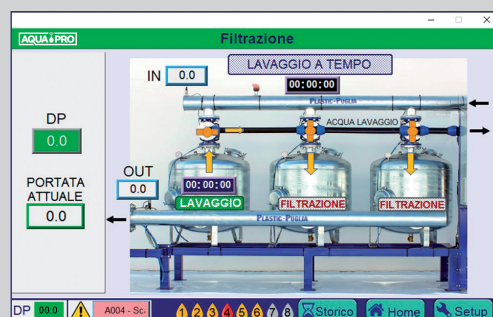

- Manual management of irrigation sectors
- Irrigation cycles programming
- Filter station management
- Fertirrigation management
- Survey of the soil conditions
- Historicity of the data and send the collected data

EXPANSION 1

Weather station data management: Pluviometry, humidity, temperature

EXPANSION 2

Pumping stations management:
Inverter control, operating temperature and ground water stress management

Code	Type
APROBASE	Basic version
APROESP1	Expansion 1
APROESP2	Expansion 2
